

Running Docker containers

INTRODUCTION TO DOCKER

Tim Sangster

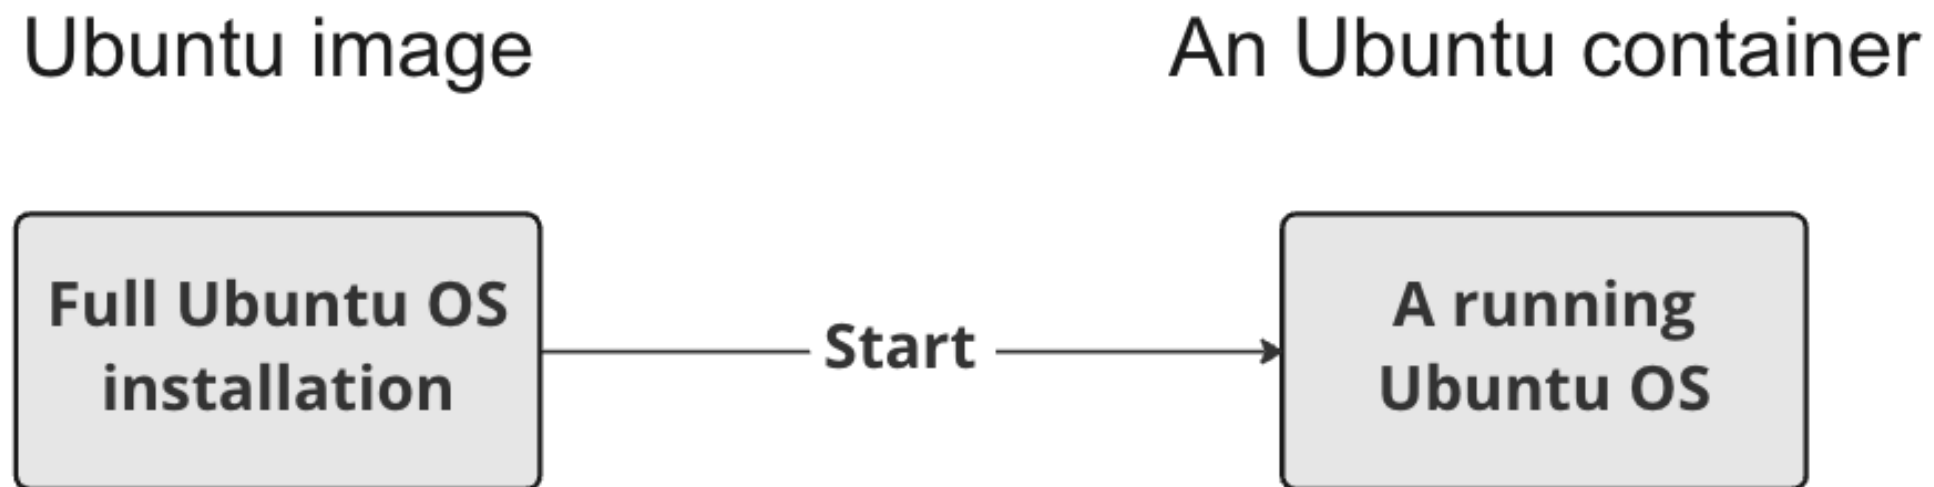

Software Engineer @ DataCamp

Prerequisite

Command	Usage
nano <file-name>	Opens <file-name> in the nano text editor
touch <file-name>	Creates an empty file with the specified name
echo "<text>"	Prints <text> to the console
<command> >> <file>	Pushes the output of <command> to the end of <file>
<command> -y	Automatically respond yes to all prompts from <command>

The Docker CLI

- Docker command line interface will send instructions to the Docker daemon.
- Every commands starts with `docker` .

Docker container output

```
docker run <image-name>
```

```
docker run hello-world
```

```
Hello from Docker!
```

To generate this message, Docker took the following steps:

1. The Docker client contacted the Docker daemon.
2. The Docker daemon created a new container from the hello-world image which runs the executable that produces the output you are currently reading.
3. The Docker daemon streamed that output to the Docker client, which sent it to your terminal.

Choosing Docker container output

```
docker run <image-name>
```

```
docker run ubuntu
```

```
repl@host:/# docker run ubuntu
```

```
repl@host:/#
```

An interactive Docker container

Adding `-it` to `docker run` will give us an interactive shell in the started container.

```
docker run -it <image-name>
```

```
docker run -it ubuntu
```

```
docker run -it ubuntu  
repl@container:/#
```

```
repl@container:/# exit  
exit  
repl@host:/#
```

Running a container detached

Adding `-d` to `docker run` will run the container in the background, giving us back control of the shell.

```
docker run -d <image-name>  
docker run -d postgres
```

```
repl@host:/# docker run -d postgres  
4957362b5fb7019b56470a99f52218e698b85775af31da01958bab198a32b072  
repl@host:/#
```

Listing and stopping running containers

```
docker ps
```

```
repl@host:/# docker ps
```

CONTAINER ID	IMAGE	COMMAND	CREATED
4957362b5fb7	postgres	"docker-entrypoint.s..."	About a minute ago
STATUS	PORTS	NAMES	
Up About a minute	5432/tcp	awesome_curie	

```
docker stop <container-id>
```

```
repl@host:/# docker stop cf91547fd657
cf91547fd657
```

Summary of new commands

Usage	Command
Start a container	<code>docker run <image-name></code>
Start an interactive container	<code>docker run -it <image-name></code>
Start a detached container	<code>docker run -d <image-name></code>
List running containers	<code>docker ps</code>
Stop a container	<code>docker stop <container-id></code>

Let's practice!

INTRODUCTION TO DOCKER

Working with Docker containers

INTRODUCTION TO DOCKER

Tim Sangster

Software Engineer @ DataCamp

Listing containers

```
rep1@host:/# docker ps
CONTAINER ID   IMAGE      .. CREATED          STATUS      ... NAMES
3b87ec116cb6   postgres  2 seconds ago    Up 1 second ... adoring_germain
8a7830bbc787   postgres  3 seconds ago    Up 2 seconds ... exciting_heisenberg
fefdf1687b39   postgres  3 seconds ago    Up 2 seconds ... vigilant_swanson
b70d549d4611   postgres  4 seconds ago    Up 3 seconds ... nostalgic_matsumoto
a66c71c54b92   postgres  4 seconds ago    Up 4 seconds ... lucid_matsumoto
8d4f412adc3f   postgres  6 seconds ago    Up 5 seconds ... fervent_ramanujan
fd0b3b2a843e   postgres  7 seconds ago    Up 6 seconds ... cool_dijkstra
0d1951db81c4   postgres  8 seconds ago    Up 7 seconds ... happy_sammet
...
```

Named containers

```
docker run --name <container-name> <image-name>
```

```
repl@host:/# docker run --name db_pipeline_v1 postgres
```

```
repl@host:/# docker ps
```

CONTAINER ID	IMAGE	COMMAND	CREATED
43aa37614330	postgres	"docker-entrypoint.s..."	About a minute ago
STATUS	PORTS	NAMES	
Up About a minute	5432/tcp	db_pipeline_v1	

```
docker stop <container-name>
```

```
repl@host:/# docker stop db_pipeline_v1
```

Filtering running containers

```
docker ps -f "name=<container-name>"
```

```
rep1@host:/# docker ps -f "name=db_pipeline_v1"
```

CONTAINER ID	IMAGE	COMMAND	CREATED
43aa37614330	postgres	"docker-entrypoint.s..."	About a minute ago
STATUS	PORTS	NAMES	
Up About a minute	5432/tcp	db_pipeline_v1	

Container logs

```
docker logs <container-id>
```

```
repl@host:/# docker logs 43aa37614330
```

The files belonging to this database system will be owned by user "postgres".
This user must also own the server process.

The database cluster will be initialized with locale "en_US.utf8".
The default database encoding has accordingly been set to "UTF8".

PostgreSQL init process complete; ready for start up.

2022-10-24 12:10:40.318 UTC [1] LOG: database system is ready to accept connect..

Live logs

```
docker logs -f <container-id>
```

```
repl@host:/# docker logs -f 43aa37614330
```

```
PostgreSQL init process complete; ready for start up.
```

```
2022-10-24 12:10:40.309 UTC [1] LOG:  starting PostgreSQL 14.5 (Debian 14.5-1.pg..  
2022-10-24 12:10:40.309 UTC [1] LOG:  listening on IPv4 address "0.0.0.0", port ..  
2022-10-24 12:10:40.309 UTC [1] LOG:  listening on IPv6 address ":::", port 5432  
2022-10-24 12:10:40.311 UTC [1] LOG:  listening on Unix socket "/var/run/postgre..  
2022-10-24 12:10:40.315 UTC [62] LOG:  database system was shut down at 2022-10-..  
2022-10-24 12:10:40.318 UTC [1] LOG:  database system is ready to accept connect..
```

Cleaning up

```
docker container rm <container-id>
```

```
repl@host:/# docker stop 43aa37614330
43aa37614330
repl@host:/# docker container rm 43aa37614330
43aa37614330
```

Summary of new commands

Usage	Command
Start container with a name	<code>docker run --name <container-name> <image-name></code>
Filter running container on name	<code>docker ps -f "name=<container-name>"</code>
See existing logs for container	<code>docker logs <container-id></code>
See live logs for container	<code>docker logs -f <container-id></code>
Exit live log view of container	CTRL+C
Remove stopped container	<code>docker container rm <container-id></code>

Let's practice!

INTRODUCTION TO DOCKER

Managing local docker images

INTRODUCTION TO DOCKER

Tim Sangster

Software Engineer @ DataCamp

Docker Hub is the world's largest library and community for container images

Browse over 100,000 container images from software vendors, open-source projects, and the community.

Pulling an image

```
docker pull <image-name>
```

```
docker pull postgres
```

```
docker pull ubuntu
```

```
repl@host:/# docker pull hello-world
```

```
Using default tag: latest
```

```
latest: Pulling from library/hello-world
```

```
7050e35b49f5: Pull complete
```

```
Digest: sha256:e18f0a777aefabe047a671ab3ec3eed05414477c951ab1a6f352a06974245fe7
```

```
Status: Downloaded newer image for hello-world:latest
```

```
docker.io/library/hello-world:latest
```

Image versions

Supported tags and respective `Dockerfile` links

- `18.04`, `bionic-20221019`, `bionic`
- `20.04`, `focal-20221019`, `focal`
- `22.04`, `jammy-20221020`, `jammy`, `latest`
- `22.10`, `kinetic-20221024`, `kinetic`, `rolling`
- `14.04`, `trusty-20191217`, `trusty`
- `16.04`, `xenial-20210804`, `xenial`

```
docker pull <image-name>:<image-version>
```

```
docker pull ubuntu:22.04
```

```
docker pull ubuntu:jammy
```

Listing images

```
docker images
```

```
repl@host:/# docker images
```

REPOSITORY	TAG	IMAGE ID	CREATED	SIZE
hello-world	latest	46331d942d63	7 months ago	9.14kB
ubuntu	bionic-20210723	7c0c6ae0b575	15 months ago	56.6MB
postgres	12.7	f076c2fa35f5	15 months ago	300MB
postgres	10.3	cbb7481ff9d5	4 years ago	232MB
...				

Removing images

```
docker image rm <image-name>
```

```
repl@host:/# docker image rm hello-world
Untagged: hello-world:latest
Untagged: hello-world@sha256:e18f0a777aefabe047a671ab3ec3eed05414477c951ab1a6f35..
Deleted: sha256:46331d942d6350436f64e614d75725f6de3bb5c63e266e236e04389820a234c4
Deleted: sha256:efb53921da3394806160641b72a2cbd34ca1a9a8345ac670a85a04ad3d0e3507
```

```
repl@host:/# docker image rm hello-world
Error response from daemon: conflict: unable to remove repository reference
"hello-world" (must force) - container 96a7b7b0c535 is using its
referenced image 46331d942d63
```

Cleaning up containers

```
docker container prune
```

```
repl@host:/# docker container prune
WARNING! This will remove all stopped containers.
Are you sure you want to continue? [y/N] y
Deleted Containers:

Summary of new commands

Usage	Command
Pull an image	<code>docker pull <image-name></code>
Pull a specific version of an image	<code>docker pull <image-name>:<image-version></code>
List all local images	<code>docker images</code>
Remove an image	<code>docker image rm <image-name></code>
Remove all stopped containers	<code>docker container prune</code>
Remove all images	<code>docker image prune -a</code>

Let's practice!

INTRODUCTION TO DOCKER

Distributing Docker Images

INTRODUCTION TO DOCKER

Tim Sangster

Software Engineer @ DataCamp

Private Docker registries

- Unlike Docker official images there is no quality guarantee
- Name starts with the url of the private registry

```
dockerhub.myprivateregistry.com/classify_spam
```

```
docker pull dockerhub.myprivateregistry.com/classify_spam:v1
```

```
Using tag: v1
latest: Pulling from dockerhub.myprivateregistry.com
ed02c6ade914: Pull complete
Digest: sha256:b6b83d3c331794420340093eb706b6f152d9c1fa51b262d9bf34594887c2c7ac
Status: Downloaded newer image for dockerhub.myprivateregistry.com/classify_spam:v1
dockerhub.myprivateregistry.com/classify_spam:v1
```

Pushing to a registry

```
docker image push <image name>
```

Pushing to a specific registry --> name of the image needs to start with the registry url

```
docker tag classify_spam:v1 dockerhub.myprivateregistry.com/classify_spam:v1
```

```
docker image push dockerhub.myprivateregistry.com/classify_spam:v1
```

Authenticating against a registry

- Docker official images --> No authentication needed
- Private Docker repository --> Owner can choose

```
docker login dockerhub.myprivateregistry.com
```

```
user@pc ~ % docker login dockerhub.myprivateregistry.com
Username: student
Password:
Login succeeded
```

Docker images as files

Sending a Docker image to one or a few people? Send it as a file!

Save an image

```
docker save -o image.tar classify_spam:v1
```

Load an image

```
docker load -i image.tar
```

Summary of new commands

Usage	Command
Pull image from private registry	<code>docker pull <private-registry-url>/<image-name></code>
Name an image	<code>docker tag <old-name> <new-name></code>
Push an image	<code>docker image push <image-name></code>
Login to private registry	<code>docker login <private-registry-url></code>
Save image to file	<code>docker save -o <file-name> <image-name></code>
Load image from file	<code>docker load -i <file-name></code>

Let's practice!

INTRODUCTION TO DOCKER
